

buynomics

Data Analyst (m/f/d)

Immediately / upon consultation

Full time

ABOUT US

At buynomics we are building the next generation consumer product and portfolio management software. Our goal is to help our customers optimize their product portfolios to maximize profitability and other relevant KPIs. We achieve this by predicting future consumer behavior based on historic sales data, behavioral economics and machine learning. We have successfully deployed our platform across 5 continents and in a multitude of projects and ongoing client relationships ranging from telecommunications, consumer goods, insurance all the way to the software industry.

We are data-driven and results-oriented. We encourage transparent communication and personal growth. We create a modern, dynamic, and flat hierarchical working environment and give you a lot of autonomy and responsibility straight from the start. We are the commercial insights solution of tomorrow. We are buynomics.

We have recently received seed funding by prestigious VCs and are now eager to take buynomics to the next level.

If you are interested in machine learning and data driven SaaS solutions, if you can identify yourself with these values and if you are curious about data engineering and want to grow in this direction, then join the buynomics team and become part of our success story!

RESPONSIBILITIES

You will play a key part in allowing us to create value from our clients' data by transforming the raw heterogenous data into data formats our algorithms can process. Furthermore, you will play a central role in automating these processes in the mid-term. While working closely with the Advanced Analytics and the Customer Success team, you will independently perform a variety of tasks, particularly:

- Handling data requests from our Customer Success team, which usually involves cleaning, preprocessing and transforming heterogenous client data fast and reliably into standard database formats
- Developing a library of functionalities needed to deal with the various formats to gain speed and facilitate automation in the mid-term
- Defining database standards and develop data pipelines (ETLs) to automatically load the data from external providers into our databases

REQUIREMENTS

- Diligent working style and strive for delivering high-quality output
- Eagerness to drive value and have impact from “Day 1” including a hands-on mentality actively helping yourself and others
- Ability to manage and prioritize several tasks simultaneously
- ≥ 1 year of experience in a data analyst or similar position
- Intermediate experience with data-processing in Python (Pandas, NumPy)
- Basic experience with SQL and Excel
- Curiosity about data engineering and the interest to grow in this field
- Very good verbal and written English (German is a plus)

BENEFITS

- Responsibility right from the start and enormous growth potential within the company and beyond initial role
- Being part of a fast-growing and highly innovative technology company with direct impact
- Deep insights into different industries and strategies of our client groups
- International, young, and dynamic team with flat hierarchies and quick decision processes
- Competitive compensation

Do you want to become a key part of the buynomics growth story and help us build a true champion in a fast-growing industry?

Please send your application incl. CV, cover letter and certificates to sherin.leisgen@buynomics.com.
