

buynomics

(Senior) Data Engineer (m/f/d)

Immediately / upon consultation

Full time

ABOUT US

At buynomics we are building the next generation consumer product and portfolio management software. Our goal is to help our customers optimize their product portfolios to maximize profitability and other relevant KPIs. We achieve this by predicting future consumer behavior based on historic sales data, behavioral economics and machine learning. We have successfully deployed our platform across 5 continents and in a multitude of projects and ongoing client relationships ranging from telecommunications, consumer goods, insurance all the way to the software industry.

We are data-driven and results-oriented. We encourage transparent communication and personal growth. We create a modern, dynamic, and flat hierarchical working environment and give you a lot of autonomy and responsibility straight from the start. We are the commercial insights solution of tomorrow. We are buynomics.

We have recently received seed funding by prestigious VCs and are now eager to take buynomics to the next level.

If you are interested in a data-driven SaaS solutions and thrive to work in a fast-paced and intellectually intense environment, then join the buynomics team and become part of our success story!

RESPONSIBILITIES

You will play a key part in productizing our internal data value chain as part of our new Data team, thus allowing us to scale our product to new clients and new industries quickly and efficiently. We offer the exciting opportunity to build data architecture and infrastructure largely from scratch. Specifically, you will:

- Design, develop, test, and maintain a data architecture and infrastructure for our clients' data that is used for both analytics and product portfolio optimization, involving architectural elements such as data lakes, DWHs, ETL pipelines, and APIs
- Design and develop routines and procedures that contribute to reaching higher degrees of automation in our data pipeline
- Assist the team with high priority operational requests, which may involve data analyses or scripting

REQUIREMENTS

You are a generalist in the field of data engineering and comfortable being responsible for the data engineering end of our data value chain, together with our Software Architects and the Data Team Lead. You are eager to tackle new challenges and technology on a regular basis. Specifically, you have:

- Strong conceptual abilities with a good understanding of business needs and excellent communication skills
- Eagerness to drive value and have impact from “day 1” including a hands-on mentality to actively help yourself and others
- Ability to effectively manage the ambiguities of a young startup and strive for excellence without much supervision
- >=4 years of experience in data engineering, with a solid foundation of software engineering skills covering code quality, automation and testing (or a willingness to grow rapidly)
- Good knowledge of python
- Basic experience with cloud computing (ideally AWS)
- Experience in analytics/data science is a plus
- Very good verbal and written English (German is a plus)

BENEFITS

- Responsibility right from the start and enormous growth potential within the company and beyond initial role
- Being part of a fast-growing and highly innovative tech company with direct impact
- Deep insights into different industries and strategies of client groups
- International, young, and dynamic team with flat hierarchies and quick decision processes
- Competitive compensation
- Office options in Cologne or Barcelona, remote possible

Do you want to become a key part of the buynomics growth story and help us build a true champion in a fast-growing industry?

Please send your application incl. CV, cover letter and certificates to richard.knudsen@buynomics.com.
